

MATSUI CHIPS
Where quality is a sure bet

Gaming Chips

Utilizing the most recent and accurate technology available, MATSUI has now extended their existing range of highly durable gaming chips. In addition to their hard wearing properties, all Matsui gaming chips feel great to the touch and are perfectly weighted for any casino player.

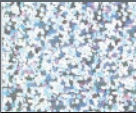

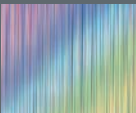

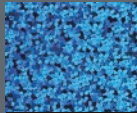

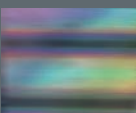

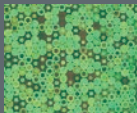

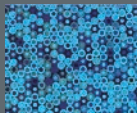

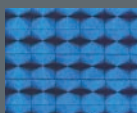

ADDITIONAL DESIGNS

Glitter

The following glitter designs are available, but only one glitter type per chip design can be used.

Glitter decals can make a basic design look more attractive. Glitter rings, logos, letters or denominations are an effective way to make chips more eye catching. Numerous glitter design types are available, but only one type per chip design can be used.

With the growing demand for a variety of decal features, we have applied our production and gaming knowledge to give you an attractive range of design options.

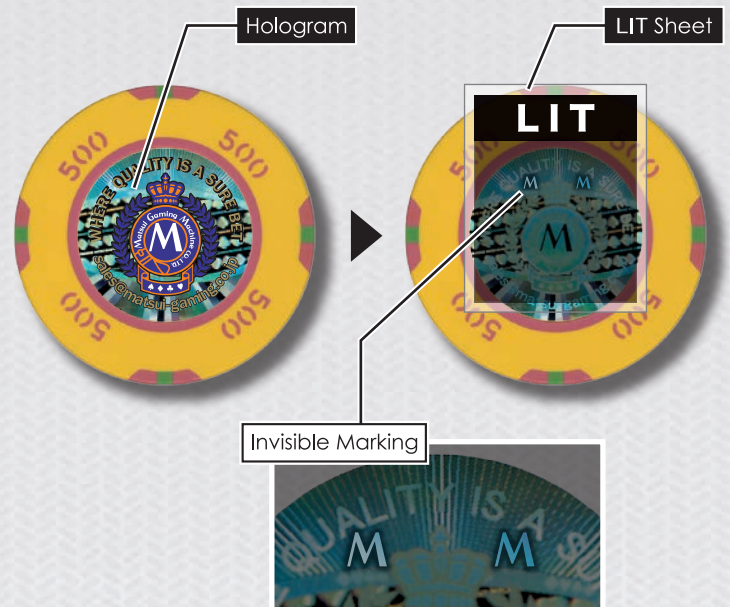

Hologram

Why not try our new hologram decal to make a more eye-catching design?

The hologram design is now common on many bank notes and passports, due to the difficulty in trying to replicate hologram properties.

If holograms are good enough for bank notes, then why not have them on your cash chips! Additional "LIT" (invisible UV markings) are also available as a further security measure that can only be seen under a special LIT sheet.

Truly a great mix of Matsui security and design.

Mirror Silver or Gold

Mirror Silver or Gold can give a similar appearance to our (Silver or Gold) coin chips. This effect is created using our unique ink range.

Serial Numbers

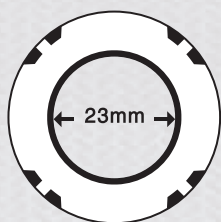

We can add serial numbers onto the rim of the chips, decal, coin inlay as well as our gold and silver chips.

INNER RING STYLE DECAL VALUE CHIPS

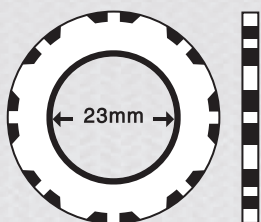

Matsui Inner Ring Decal Chips are our most popular and best-selling casino chips. We have a wide selection with a full range of denominations. The inner rings moulds are available in number only, \$ and Euro and will fit 39mm, 40mm and 43mm chips. With this wide-ranging selection, we're sure to have the denominations you require and it's also possible to customize your own unique inner ring mould.

SECURITY MANUFACTURING

The MATSUI complex on the outskirts of Seoul, Korea houses our purpose built chip manufacturing plant and modern offices.

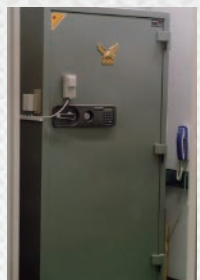

The manufacturing units and the dedicated staff are committed to increasing customer satisfaction through distribution of the world's highest quality gaming chips. This includes the customized marketing, careful design and precise production incorporating the latest innovative security features.

MATSUI uses a wide range of environmentally friendly materials. We also apply state of the art moulding techniques to manufacture the most accurately shaped and time tested gaming chips. The plant is extensively maintained, keeping a clean and temperature controlled environment, thus ensuring the quality of the chips are always kept to the highest possible standards.

The Matsui Group are undertaking continual research and development, constantly looking for innovative solutions to help solve the security problems faced by casinos worldwide.

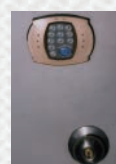

When producing gaming chips, security is one of the most vital aspects to be considered. MATSUI solves this issue using a variety of methods.

Top range security cameras cover both the manufacturing line and the outside of the complex. All chips and materials used during the manufacturing process are secured in vaults only accessible to authorised personnel and 24hr security guards

are in place both inside and outside the plant. These precautions guarantee that any product cannot be removed from the plant without authorised approval.

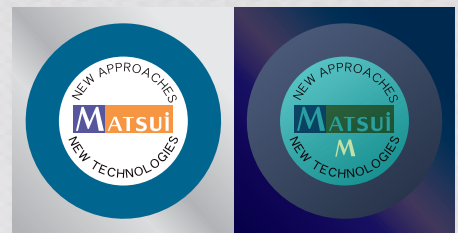

All gaming chip data is stored in a management controlled setting to ensure all data is secure and repeat orders can be readily accommodated.

UV Marking

■ Invisible UV Marking.

Green or red ultraviolet markings can be added to both chips and plaques to prove their verification.

The markings that can also be customized are only visible under a UV light.

Invisible UV Marking

■ Visible UV Marking.

Silver or gold printwork of the decal can be UV reflected.

The printed colours will glow green or red under a UV light.

Visible UV Marking

SECUR-e-CHIP ANTI-THEFT SYSTEM

The actual loss of gaming chips through internal theft is difficult for anyone to measure. With the MATSUI Secur-e-Chip system you can feel safe in the knowledge that no chips will be removed from the gaming floor without detection.

Contentment for Managers and Security.

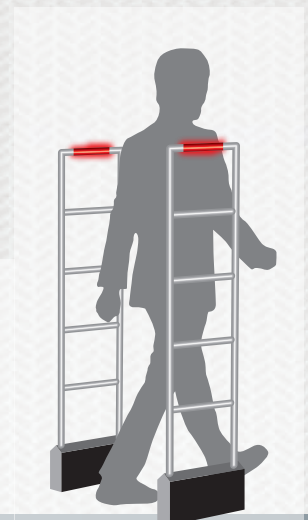

Casino management can have peace of mind knowing that gaming chips will not be taken off the gaming floor by casino without their specific authorization.

Alarm Management

The “Secur-e-Chip” anti-theft system can be interactive with CCTV cameras and through SMS messaging alert security personnel in the event of attempted chip theft. When the chips pass through strategically placed security sensors, the alarm is activated. These chips can also be detected by hand held security devices.

How it works.

Electronic Article Surveillance (EAS) material is applied to the inside of the gaming chip. This then generates an invisible electro magnetic field that can trigger an alarm when it passes through electronic detection gates. Most casinos have a route that staff members must follow off the gaming floor. By using MATSUI's open or concealed EAS systems, you can ensure superb detection and stop all casinos gaming chip theft. An efficient installation enables most systems to be installed within half a day.

Amorphous Magnetic Chip

EAS Gate

MG EYE-SP · MG EYE-MB

How it works

MG EYE

A unique decal printing method, exclusive to MATSUI, lets us create a gaming chip impossible to duplicate.

MG EYE Scanner

How it works

Specifications

MG EYE Scanner	
Dimension	63mm(W)x162mm(L)x70mm(H)
Weight (without battery)	190g
Power Consumption	DC5V / 620mA
AC Adaptor	
Voltage	Input AC100-240V Output DC5V/2A
Frequency	50/60Hz

MG EYE-SP · MG EYE-MB

When chips are placed into a chip authentication reader, an alarm/light is then activated to distinguish between genuine and counterfeit chips. The production time is unchanged from that of non MG Eye chips, so all Matsui chips are delivered at an exceptional lead time. Inexpensive readers can be placed on live gaming tables, cashier desks or security offices.

MG EYE Scanner

When chips are projected by lens, a print with special ink will be shown on LCD screen. The production time is unchanged from that of non MG Eye chips, so all Matsui chips are delivered at exceptional lead time. This device is available

to use with AC adaptor or battery. If you connect RCA cable to the output terminal, the vision of LCD screen will be able to project to external monitor.

RFID

Matsui-13.56 RFID

Matsui 13.56 RFID Chips & System is the latest security system using radio frequency identification at 13.56Mhz. It's now possible to recognize a large volume of chips simultaneously under stable cash desk conditions. This will surely become an innovative new approach to your casino management. With these chips designed at 11g (weight) we then apply an electronic magnetic label to prevent robbery. This is based on the existing security environment. All the standard Matsui decal chips, plaques and jetons are now available with RFID.

It can protect your casino from counterfeit chips, whilst helping acquire information and confirmation about chip trading, stock situations and actual account of each table all in real time.

RFID-enabled Casino Chips Management System

This system works by planting an RFID tag into the casino chip to prevent forgery or theft and can obtain and manage trading information in real time! The system can check status of chip stock, trade, settled payments per table, customer betting, winning and losing status at any given time. Whilst monitoring and controlling any inappropriate actions a customer may try to make.

Features

– HF RFID

- Capable of recognizing many units quickly and at the same time.
- Stable packaging structure and format safe from breakage.

– Overcame RF Interference

- Provides the hardware system with the algorithm which minimized the RF interference.
- Provides the method to control RF interference through software mechanism.

– Grid Computing

- Even when the chip is forged physically, the logic mechanism can perfectly control the chips.
- Perfectly prevents information loss when there is hardware or network system trouble.

– Flexible Software System

- Modules suitable for each system are provided that they can be easily operated with the existing casino management system (CMS).
- The system is designed independently from RFID hardware.

Expected Effects

- Prevention of forgery of casino chips
- Prevention of theft of casino chips
- Monitors various rule breaking activities in the casino
- Checks the stock of casino chips

- Real time monitoring of casino chip trade status
- Real time settlement by each table
- Real time confirmation of betting, winning, and losing status for each customer.
